

The Passive House Network Training:

Education that connects design & construction decisions to deliver effective results.

Customize an in-house course for your group's needs & start building climate solutions today!

Most buildings use too much energy, provide unreliable indoor air quality, are not safe in blackouts, are uncomfortable, and are expensive to operate and maintain. Passive House Network training is a high-performance building literacy program, providing the cornerstone for building-driven climate solutions.

Working in partnership with the Passive House Institute we provide a global knowledge community to scale these efforts and deliver new and renovated buildings that are climate solutions.

Courses are for architects, engineers, consultants, builders, construction managers, owners, developers, regulators, and policymakers.

Intro Courses

For everyone interested in Passive House There's a free 1-hour training, a paid half-day training, and one specifically for builders. If you're unsure about Passive House, these courses are a great way to get started, one step at a time.

Certification Courses

Provides professional certification for those working on Passive House buildings and want a recognized credential. This includes the Certified Passive House Designer (CPHD) course for architects, consultants & engineers, and the Certified Passive House Tradesperson (CPHT) course for builders, and tradespeople.

Specialized Courses

Provides expert training as particular roles may require. This includes the design and energy modeling software like PHPP, THERM, and Design PH, and includes deeper dives into retrofits, windows, operations, and more.

Available On-Demand, Live-Online, and In-Person.
